

Abstract

A non-stick coating formed on a substrate comprising a primer composition
5 and a topcoat composition, wherein the primer composition is between the topcoat
composition and substrate. The primer composition comprises at least one heat
resistant adhesion promoter. The topcoat composition comprises at least one
fluorocarbon resin and at least one heat resistant adhesion promoter other than a
fluoropolymer that may be the same or different than the adhesion promoter of the
10 primer composition. There are inorganic inert particles with an average particle size
of at least about 10 micrometers contained in the primer composition. The
invention includes the method for forming the coating.
